## Occupancy linked controls

Occupancy linked controls perform many of the tasks of a building management system (indeed they are often a core component of these systems). They can, however, be installed into smaller properties at lower cost and do not require skilled management. This fact file provides a description of the range of Occupancy Linked Controls that are available on the market. It goes on to help hospitality managers identify which system may be best for their specific type of premises; understand the level of savings that may be achieved from their installation; and identify the key issues that should be included in any brief to install the technology.
