## **Energy Efficient Refrigeration**

It is not unusual to find that, in many hospitality establishments, refrigeration is badly used, poorly managed and maintained, giving scope for worthwhile savings in consumption and costs. Good maintenance of existing equipment or replacing it with the latest energy efficient alternatives, together with good management and staff training on the use of refrigeration can reduce refrigeration related energy costs by 20 to 50%. This Fact file will help you to:

- Operate your existing refrigeration plant as efficiently as possible
- Assess whether or not you need to replace all or parts of your existing plant
- Consider the range of refrigeration equipment available on the market
- Ask pertinent questions of suppliers, consultants, or other specialists in order to decide upon the most energy efficient and cost effective option for your business
